Jaya,

Andre Davis is going to approve this via email for you and will go into the system later and try to approve it there.

(He ran into some problems in the SNOW ticketing interface, and may need to reach out to get your assistance in logging his approval in the system.)

Adding info from other email thread:

Subject: RE: OIT request for a CSV, XML, or JSON endpoint - VHA Forms DB

Good afternoon Andre – Jaya is looking for an ISO approval for my team to get a nightly data extract in an SSIS package from the VA forms database (db name: VHAForms for VA Forms <https://www.webdev.va.gov/vaforms>). I'm currently working with the VA forms managers and program manager Kevin Reid, who are CCD in the original email thread below. I have permission from the business owners, but it appears we need ISO approval instead.

The forms meta data are already publicly available information via this site: <https://www.va.gov/vaforms/> and does not include any PII or other 'private' information.

Would you be able to provide the necessary permission for the SSIS package that Jaya needs in order to move forward with **Ticket # RITM2334228** ?

Jennifer,

There is no way for us to transfer the ticket **RITM2334228** to our group, but I was able to transfer the related ticket **SCTASK3069299** to us and assign it to Jaya. We just need your ISO approvals to proceed.

For future reference, follow the instructions for opening tickets on the automated email you receive when you email WebOps.

Thank you.

Hi Jaya,

Just so I'm doing this correctly. I already submitted a Service Now (SNOW) ticket here: **Ticket # RITM2334228** Should I submit another/different ticket?

I didn't see the ability to assign it to a group when I filled it out, but just added a note now to ask the support team to do that. Just want to make sure I'm not clogging up the queue with duplicate requests. I'm adding Pamela Coggins-Simms to this email thread; she reached out to me separately about this ticket, and I want to ensure all parties are working together.

Also, the ISO supporting the owners of the database (VHAForms for VA Forms <https://www.webdev.va.gov/vaforms>) - I believe they are on this email. @Vaccaro-Palomaki, Missie or @McCarthy, Brian – can you provide Jaya the written email approval they need in order to provide the meta data extract? (As a reminder – this is part of the forms search modernization work that you are both on the working group for.) Thank you!

Ken

Subject: Re: [EXTERNAL] Re: OIT request for a CSV, XML, or JSON endpoint - VHA Forms DB

I don't have a good sense of where to place the file. It just has to be a place that our server(s) can grab it with cURL. It could be in a public S3 (it is public data) or it could be somewhere that it is exposed on VACRRSQLWEBAE03.vha.med.va.gov

It would be ideal if it is public, but if it needs credentials to get there, we can do that too.

If it would speed things up I can set up a zoom call with our devops engineers to coordinate more specifics.

Hi Jaya,
Do you take DTS package? I don't have SSIS.

Jennifer,
Which tables do you need to be exported? By looking at the database, form table has its reference tables such as keywords and prefix. Do you need them to be exported separately or to be consolidated into one file?

Subject: RE: OIT request for a CSV, XML, or JSON endpoint - VHA Forms DB

Hi Jayasree – The problem is that my Drupal engineer is not experienced with making SSIS's.

Trust me, I would love for my team to be able to do this, as that would save us from added layers of red tape, but we do actually need your help. And was advised that we needed to submit a ticket to follow protocol.

Is this ticket something that's very difficult to fulfill? My understanding is that extracting the meta data is not that difficult for a SQL engineer, which unfortunately we don't have on our team.

Let me know if hopping on a call will be more helpful.

J.

We gave access to database so whoever have access can pull data in whatever format they want by creating SSIS package or any other tool and schedule it daily. Developer can create SSIS package and send it over to us so that we can schedule it on the server.

Additionally – in case this helps provide context: We actually already have been granted access to the database, we're just requesting a more accessible format of the data. And the VA Forms DB does not include any PII. Hope that helps.

J.

Subject: RE: OIT request for a CSV, XML, or JSON endpoint - VHA Forms DB

Thank you for that info, Perry. I will take a look.

Just to clarify though -- I am not asking for access to an individual person. We simply need some kind of XML, JSON, or CSV endpoint -- "extract" as you put it -- for a nightly migration of the meta data. We would be pulling from that extracted information via the CMS system.

The owners of the VA forms database are on this email - I'm ccing Missie Vaccaro-Palomaki, Brian McCarthy, and the forms db program manager Kevin Reid.

Missie and Brian - this is part of the forms search and detail landing page modernization working group effort. In order to bring in the forms data from the forms DB, my Drupal migration engineer needs an automated nightly 'extract' of the forms meta data in the form of a XML, JSON, or CSV. (So if we do this, we don't even actually have to connect directly to the database.) Could you give Web Ops permission to give us access to this "extract"?

Best,
Jen

Non-VA email accounts have been removed from this email thread. Per the ISO, it is against VA policy to discuss government business using non-VA accounts.

Jennifer,

We only grant access to the development servers, not production. Additionally, the user must have a VA account/email address. We do not grant access to .com accounts.

Also, all database extracts from production systems and for the copy of the production database need to include the approval of the ISO supporting the owners of the website/application.

You can find more information at: <https://www.webops.va.gov/rm/4bx/2get=article&aid=2014-SQL-0428091956&v=1>

Subject: OIT request for a CSV, XML, or JSON endpoint - VHA Forms DB

Hello,

I submitted this ticket for my team's Drupal engineer, Steve Wirt. I have not filled out this type of request before, so if you can let me know if there are any issues or missing information in the ticket, I would really appreciate it.

This is part of the modernization and redesign of the VA.gov user interface for finding VA forms that the Public Website team in DEPO is working on. Steve Wirt, our migration engineer would like our servers to have access to a production forms database export in either CSV, XML or JSON format that is created on cron once per day (preferably before midnight), so that the Content Management System (Drupal) can import the content repeatedly. It should include all fields in the master table with the exception of the actual file blobs. This file should be in a location (it can be up to OIT) that is not public, but is freely accessible via curl inside the VA network.

https://vaww.vashare.oit.va.gov/sites/connect/WebOperationsForms/_layouts/15/FormServer.aspx?xmlLocation=/sites/connect/WebOperationsForms/Access%20Request/steve.wirt_civicaactions.comDatabase-2020-06-02T15_16_47.xml&ClientInstalled=true&DefaultItemOpen=1&Source=https%3A%2F%2Fvaww%2Fvashare%2Foit%2Eva%2Fgov%2Fsites%2Fconnect%2FWebOperationsForms%2FAccess%2520Request%2FForms%2FReview%2520Access%2520Status%2Easpx
