

- CRITERIA FOR EVALUATING APP NAVIGATION MODEL, UI
1. Extensible & future proof
 2. Default landing screen provides space for dynamic personalization (both content & tabs)
 3. Default landing screen provides space for featured content or tasks (not cross-relevant)
 4. Core navigation is the same for every user
 5. Supports user mental model (taxonomy, taxonomy and site map)
 6. Is accessible (cognitive disabilities, assistive technology)
 - gesture info specific (less is more)
 7. Adheres to native mobile platform guidelines & best practices for both iOS & Android
 - clear, well-known navigation pattern
 - makes it clear where the user is at all times
 - supports efficient navigation
 - Default initial screen is easily accessible from any other screen within a few taps
 8. Feasible within React Native
 9. Doesn't impact responsiveness/speed negatively

- ✓ = Meets all criteria
✓ = Meets some criteria
✗ = Does not meet criteria

- ✓
✓
✗

Tab bar = categories only

V14 - Profile on home as Veteran's name, settings secondary

- ✓ ATfy - How do users know to tap on ID card/profile?
✓ BR - Where is the evergreen contact card/location context?
HSP - Settings icon is in a really odd place (typically reserved for back/contextual settings)
How do categories & features work? (Do they make it clear where the user is at all times?)

EK - v1

- ✗ BR - No room to grow in global nav (Where would something like search live?)
ATfy - need about order for evergreen content feels too prominent
ATfy - some need labels
Home - What's on the home screen if there are no updates/features to take?
How do categories & features work? (Do they make it clear where the user is at all times?)

EK - v2

- ✗ BR - No room to grow in global nav (Where would something like search live?)
ATfy - some need labels
ATfy - need about order for evergreen content feels too prominent
Home - What's on the home screen if there are no updates/features to take?
How do categories & features work? (Do they make it clear where the user is at all times?)

V6 - profile in tab bar

- ✗ BR - No room to grow in global nav, but handled in top bar
Search feels like it'd be a higher priority & more suitable on a global action than Profile

- ✗ BR - No room to grow in global nav (Where would something like search live?)
BR - Where is the evergreen location context?
Home - What's on the home screen if there are no updates/features to take?
How do categories & features work?

V19- Tab Nav & Waffle grid as hub in category

- ✓ ATfy - category landing needs labels under home
ATfy - is a grid accessible/parsable enough?

EK - v3

- ✓ ATfy profile icon needs a label
✓ BR - What's on the home screen if there are no updates?
How does a child of Profile or Health work? (Thinking about done buttons)

Tab bar = categories only + More

V2 - more in tab bar, profile in nav bar

- ✓ HSP - Home feels like a potential junk drawer - items aren't as discoverable, poor use of space
✓ Would search in top bar be prominent enough, or should it be a global action?

How do "Home" icons allow for more items & a single accessible way to navigate across them. This is a mental model can come from icons and text, but more elements are not taking up the tab bar space.

Consider making the menu accessible to a subcategory to help the user find what they want to do. The "Home" icon is a more common place for search.

V4 - more in tab bar (profile in more)

- ✓ HSP - Home feels like a potential junk drawer - items aren't as discoverable, poor use of space
✓ Would search in top bar be prominent enough? Right side is a global action, but top bar is a less common place for search

V3 Home = account, profile + more

- ✓ HSP - Home feels like a potential junk drawer - items aren't as discoverable, poor use of space
✓ Would search in top bar be prominent enough? Left side is not a global action
Home - What's on the home screen if there are no updates/features to take?
Where is the evergreen contact card/location context?
How do categories & features work?

Tab bar = features + categories

V18- "Tasks" in tab bar

- ✗ BR - No room to grow in global nav
BR - How do we know where else to go? Should important/contextual tasks be more prominent (not hidden behind a top)?
Would search in top bar be prominent enough? Right side is a global action, but top bar is a less common place for search

V9 - profile in nav bar, letters in global nav

- ✓ BR - No room to grow in global nav
Would search in top bar be prominent enough? Right side is a global action, but top bar is a less common place for search

V15 - profile in nav bar, categories as top tabs

- ✗ HSP - vertical location for tab navigation (top usually used to distinguish between categories of the same data type, not as primary tool - users will need to learn it)
ATfy: tab navigation not in thumb zone

V1 - profile in nav bar (room to grow in tab bar)

- ✓ breaks all criteria
Need about order for critical time!
What is displayed if there isn't any featured content or personalized items?
Is it possible there are too many things on the home screen - would it be possible to thin it out?

Tab bar = personalized + everything else

V16- Tab bar contains browse section w taxonomy

- ✗ ATfy - How categories/categories is hard to know what the app is about at a glance
ATfy - HSD. The few tabs can lead to categories or features that are too broad to be useful, requiring people to select a tab that is not what they want
ATfy - Browse tab will be very long (cognitive overhead)
HSP - Features relating to home or browse in order to switch tabs, can't hold your place (physical for iOS)

No category landing screens to accommodate section content that doesn't deserve to be on home screen - What's on the home screen if there are no updates/features to take?

V16a- Tab bar contains browse section w taxonomy

- ✗ ATfy - How categories/categories is hard to know what the app is about at a glance
ATfy - HSD. The few tabs can lead to categories or features that are too broad to be useful, requiring people to select a tab that is not what they want
ATfy - Browse tab will be very long (cognitive overhead)
HSP - Features relating to home or browse in order to switch tabs, can't hold your place (physical for iOS)

No category landing screens to accommodate section content that doesn't deserve to be on home screen - What's on the home screen if there are no updates/features to take?

- CRITERIA FOR EVALUATING APP NAVIGATION
- MODELS
- 1. Extensible & future proof
 - 2. Default landing screen provides space for dynamic personalization—both content & tools
 - 3. Default landing screen provides space for featured content or tools (and cross-references)
 - 4. Core navigation is the same for every user
 - 5. Supports user mental model buckets, taxonomy and site map
 - 6. Is accessible (cognitive disabilities, assistive technology)
 - parse info quickly (less is more)
 - clear, well-known navigation pattern
 - makes it clear where the user is at all times
 - 7. Adheres to native mobile platform guidelines & best practices for both iOS & Android
 - supports efficient navigation
 - Default/initial screen is easily accessible from any other screen within a few taps
 - 8. Feasible within React Native
 - 9. Doesn't impact responsiveness/speed negatively

- = Meets all criteria
- = Meets some criteria
- = Does not meet criteria

-
-

Tab bar = features only

V5- Home as Hub, tab bar contains top tasks

- Atty - Taxonomy on home = Lots of choices; home tab will be very long, esp if there's a personalized content (cognitive overhead); harder to parse info quickly
- BR - can't personalize/change important tasks per user when they are global navigation
- HSP - Requires returning to home in order to switch tasks that aren't in tab bar (home = hub)
- would tasks that are organized under categories also appear in the tab bar?

V20- Favorites, notifications, browse, action

- HSP & atty - Placement of home icon = Not a well known mobile pattern
- HSP & atty - Default for users to tell where they are in taxonomy
- atty - Taxonomy on browse = Lots of choices; tab will be very long, esp if there's a personalized content (cognitive overhead); harder to parse info quickly
- atty - features/categories are less discoverable, requires a tap to see what the app is capable of at a glance
- A potential issue with browse is some of the high level buckets are showing making them less discoverable and more clutter to get to what they are looking for
- atty - is category grid too hard to scan?
- browse = essentially an action drawer, but treated in an unconventional way
- Home & favorites feel like the same tab
- Are the things in 'do a thing' contextual or global? Why require an extra tap to display them

Nontraditional tab bar

V13- Do a thing FAB - actions are contextual

- HSP - physical location for tab navigation (top usually used to distinguish between categories of the same class type, not as primary nav)—users will need to scan it
- atty - FAB buttons require a tap to see what's possible in each context - not discoverable or screen reader friendly

V17- Embedded dropdown as main nav

- HSP & atty - Dropdown used to change categories or features= not a well known navigation pattern - how would that work as a menu with a screen reader?
- HSP & atty - dropdown primary nav pattern hides navigation options behind a tap, doesn't show what else possible to navigate to when you're in a section, requires a tap to see what the app is capable of

Where would a global feature like search live?

Home as Hub

V8 - Home as Hub w Category screens

- Atty - Lots of features = Home tab will be very long, esp if there's a personalized content (cognitive overhead); harder to parse info quickly
- Atty & HSP - no global navigation: hard to tell where user is when down a level
- HSP - Requires returning to home or browse in order to switch tasks, can't hold your place (physical for iOS)

V10 - Home = Account/Hub (no category screens), profile in nav bar

- Atty - Lots of features = Home tab will be very long, esp if there's a personalized content (cognitive overhead); harder to parse info quickly
- atty & HSP - no global navigation: hard to tell where user is when down a level
- HSP - Requires returning to home or browse in order to switch tasks, can't hold your place (physical for iOS)

V12 - Quartiles as hub

- Atty & HSP - no global navigation/atypical navigation pattern: hard to tell where user is when down a level
- atty - quartiles aren't as scannable
- atty & HSP - physical location/treatment for back/home
- alignment content will be read first by screen reader - too prominent?

V7 - Home as Hub (no category screens), profile in nav bar

- Atty - Lots of features = Home tab will be very long, esp if there's a personalized content (cognitive overhead); harder to parse info quickly
- Atty & HSP - no global navigation: hard to tell where user is when down a level
- HSP - Requires returning to home or browse in order to switch tasks, can't hold your place (physical for iOS)

Drawer

V11- Home = Account/personalized stuff, categories in drawer

- atty - in a drawer, features/categories are less discoverable, requires a tap to see what the app is capable of at a glance
- atty - long list of options is harder to parse
- A potential issue with the drawer is "out of sight out of mind" - Difficult to discover the main buckets
- HSP - drawer isn't a common iOS pattern
- atty - in order for search to be globally accessible, drawer need to be displayed globally, so users can switch between features

V11b- Home = Account/personalized stuff, categories in drawer

- atty - in a drawer, features/categories are less discoverable, requires a tap to see what the app is capable of at a glance
- atty - long list of options is harder to parse
- atty & HSP - global row disappears at subsection level, requires user to return to home & tap to reopen drawer
- HSP - drawer isn't a common iOS pattern
- A potential issue with the drawer is "out of sight out of mind" - Difficult to discover the main buckets

CRITERIA FOR EVALUATING APP NAVIGATION MODEL UI

1. Extensible & future proof
2. Default landing screen provides space for dynamic personalization—both content & tools
3. Default landing screen provides space for featured content or tools (incl cross-references)
4. Core navigation is the same for every user
5. Supports user mental model buckets, taxonomy and site map
6. Is accessible (cognitive disabilities, assistive technology)
7. Adheres to native mobile platform guidelines & best practices for both iOS & Android
8. Doesn't impact responsiveness/speed negatively

★ Tab bar = features + categories

V1 - profile in nav bar, profile & detail views as overlay

Issues: passes all criteria

Questions:

- read about order for crisis line?
- modal treatment for detail views, profile (settings is needed, potential multistep editables) - vs per EXOT?

Strengths:

- Meets all business criteria
- permanent, personalized homescreen piece (personal summary)
- adheres to MBP, uses known UI pattern for global navigation
- User can tell where they are at all levels (tab bar, descriptive back button labels, differences in density of info between levels)
- Room for different levels of summary based on timeliness & urgency (home > category)

Tab bar = categories only

V14 - Profile on home as Veteran's name

Issues: passes all criteria

Questions:

- Putting profile into a card on the home screen is a more unexpected pattern for this info than a profile category in the nav or top bar (is it enough?)
- read about order for crisis line?
- Would search icon in top bar be prominent enough? Right

Strengths:

- Meets all business criteria
- permanent, personalized homescreen piece (personal summary)
- adheres to MBP, uses known UI pattern for global navigation
- User can tell where they are at all levels (tab bar, descriptive back button labels, differences in density of info between levels)
- Room for different levels of summary based on timeliness & urgency (home > category)

Tab bar = features only

V5 - Home as Hub, tab bar contains top tasks

Issues:

- Atty - Home tab will be very long, esp if there's personalized content - harder to parse info quickly
- Atty/MBP - tab bar doesn't give you a sense of where you are in the app (atypical)
- BR - Can't personalize/change important tasks per user if they are part of global navigation, so this placement is less effective than in-content important tasks (which can vary per user)
- Requires returning to home in order to switch tasks that aren't in tab bar (home > hub)
- Duplication of some features between tab bar & home

Strengths:

- Meets all business criteria
- permanent, personalized homescreen piece (personal summary)
- uses known UI pattern for global navigation

★ V5a- Home as Hub, tab bar contains top tasks

Issues:

- Atty/MBP - tab bar doesn't give you a sense of where you are in the app (atypical)
- BR - Can't personalize/change important tasks per user when they are global navigation, so this placement is less effective than in-content important tasks (which can vary per user)
- Requires returning to home in order to switch tasks that aren't in tab bar (home > hub)
- Duplication of some features between tab bar & home

Strengths:

- Meets all business criteria
- permanent, personalized homescreen piece (personal summary)
- uses known UI pattern for global navigation
- User can tell where they are at all levels (descriptive back button labels, differences in density of info between levels)
- Room for different levels of summary based on timeliness & urgency (home > category)

Drawer

V11a- Home = Personalized stuff, categories in drawer

Issues:

1. Atty - in a drawer, features/categories are less discoverable, requires a tap to see what the app is capable of at a glance
2. Atty - A potential issue with the drawer is "out of sight out of mind"
3. Atty - long list of options in drawer is harder to parse (cognitive overload)
4. MBP - drawer isn't a common iOS pattern, and is less common even on Android as primary nav
5. In order for search to be globally accessible, drawer need to be displayed globally so users can switch between features
6. If drawer includes ALL of the app's taxonomy, it will duplicate evergreen homescreen items
7. No category landing screens to summarize section content that doesn't deserve to be on home

Strengths:

- Meets all business criteria
- permanent, personalized homescreen piece (personal summary)
- adheres to MBP, uses known UI pattern for global navigation
- A strength of the browse is being able to see everything all at once
- User can switch to any section of the app without traversing a hierarchy

Tab bar = personalized + everything else

V16a- Tab bar contains browse section w taxonomy

Issues:

1. Atty/MBP - "functionally, the 'browser' tab is the same as on Android drawer, but uses an unexpected UI pattern to reveal it. Also unusual in mobile to only have 2 icons in tab bar
2. Atty/MBP - Two ambiguous categories (out of 3) = hard to know what the app is about at a glance, requiring people to select a tab to find out what it contains
3. Atty - A potential issue with the browse tab is "out of sight out of mind"
4. Atty - Browse tab will be very long & harder to parse (cognitive overload)
5. Atty/MBP - Global nav disappears at subsection/feature level
6. If browse includes ALL of the app's taxonomy, it will duplicate evergreen homescreen items
7. No category landing screens to summarize section content that doesn't deserve to be on home
8. With this option, we are making settings the most discoverable category (research & BR suggests this is the wrong hierarchy)

Questions:

- Will users discover & understand the purpose of the Browse tab?
- read about order for crisis line?

Strengths:

1. Meets all business criteria
2. permanent, personalized homescreen piece (personal summary)
3. User is able to see everything all at once in browse tab
4. User can switch to any section of the app without traversing a hierarchy

★ V16b- Tab bar contains browse section w taxonomy

Issues:

1. Atty/MBP - Two ambiguous categories = harder to know what the app is about at a glance, requiring people to select the browse tab to find out what it contains, features/categories are less discoverable
2. Atty - A potential issue with the browse tab is "out of sight out of mind"
3. Atty - long list of options in drawer is harder to parse (cognitive overload)
4. Atty/MBP - Global nav disappears at subsection/feature level
5. If browse includes ALL of the app's taxonomy, it will duplicate evergreen homescreen items
6. With this option, we are making profile the most discoverable category (research & BR suggests this is the wrong hierarchy)
7. No category landing screens to summarize section content that doesn't deserve to be on home

Questions:

- Will users discover & understand the purpose of the Menu tab?
- read about order for crisis line?

Strengths:

- Meets all business criteria
- permanent, personalized homescreen piece (personal summary)
- User is able to see everything all at once in menu tab
