

How to set up the VA Mobile App prototype on an Android phone

You will need: Your Android phone, access to your email account

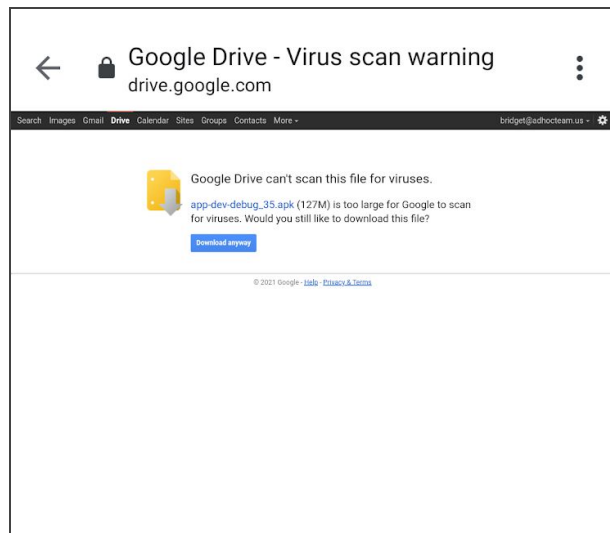

Step 1

A link will be sent to your email address to a Google Drive folder. In that folder will be an .APK file of the VA mobile app that can be downloaded locally onto your phone. Open the app file in Google Drive and click **Download**.

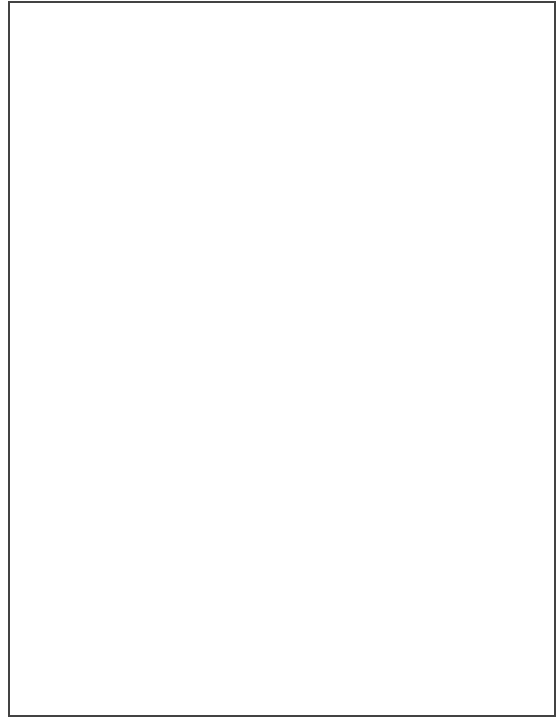

Step 2

The file will be too big for virus scanning, but click **Download anyway**.

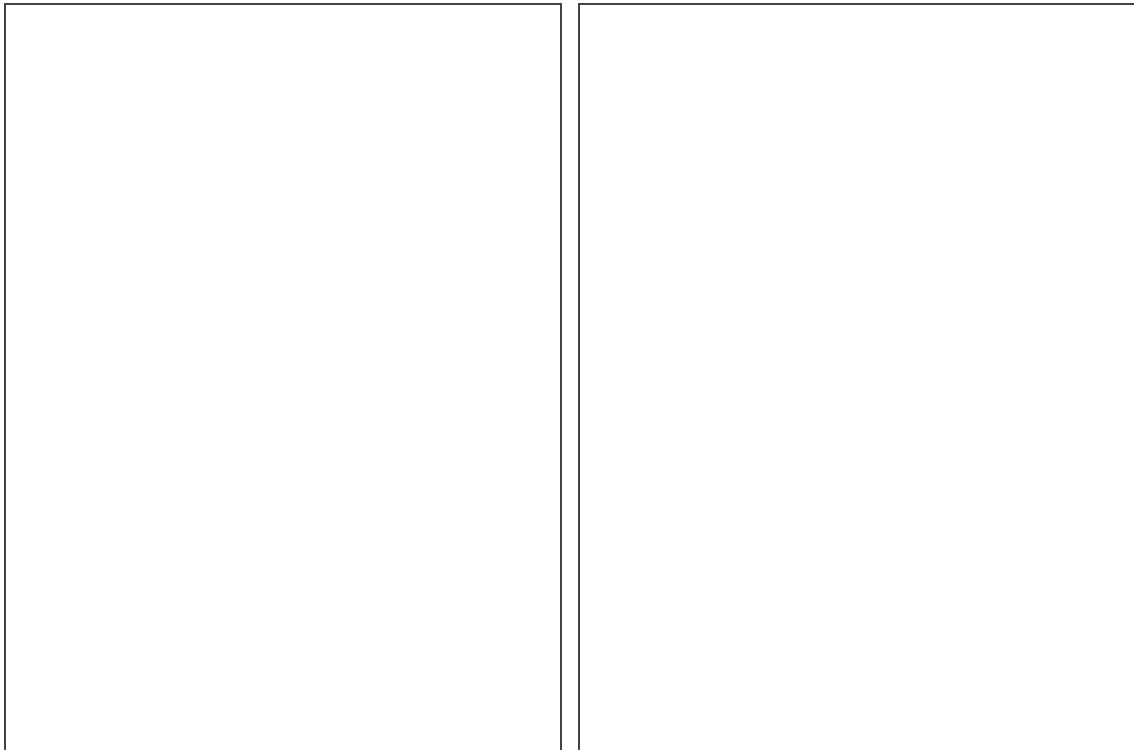

Step 3

Once the file has downloaded to your phone (this might take a few minutes), open it and select **Install**.

Step 4

You may need to change your phone's security settings to allow the app to successfully install. Turn on **Allow from this source** to allow installation.

Step 5

Once installed, you will be able to find the app from your device's homescreen labelled **VA Mobile** with an Android icon.

Note → This app will not update when new builds are released.
