

Eligibility API for VA.gov

Unique Veteran Identifier (input from VA.gov)

VA.gov will pass a unique identifier to LGY API to be used to identify the Veteran:

- VA.gov will pass ICN and EDI-PI identifiers to LGY API to be used to identify the Veteran
 - ICN will be the primary identifier to access the Veteran record
 - EDI-PI will be the secondary identifier used to access VADIR as part of the eligibility determination
 - LGY does not currently use ICN
 - An integration with MPI will be needed for LGY to leverage ICN as the primary identifier

Note: For the historical records to be available to the Veteran, LGY will use ICN to look up the Veteran's SSN to find prior Veteran COE records. The Veteran SSN will only be used to search for the historical Veteran COE records and will not be visible

- Will need to have prod2lower (the refresh from prod database) that when the info is scrambled (ie SSN) that somehow keep the ICN/EDIPI in sync so it matches the same record.

Eligibility Determination (output from LGY Eligibility API)

The eligibility determination refers to the Veteran's qualification to participate in the VA Home Loan Program.

- Overall Status - Provide a simplified list as compared to the full set of statuses possible
 - Eligible
 - Not Eligible
 - Unable to Determine Automatically (is this Unsuccessful in today's LGY logic)
- Descriptive Status - Provide additional details for the status - this is for descriptive messages - will need to determine if LGY will provide the exact Descriptive Status for VA.gov to display or if we provide a code and VA.gov creates the messaging. Concern if VA.gov is providing the messaging and a VA policy update occurs that there would be no notification to VA.gov to update messaging.
 - No qualifying military periods
 - Character of Service not acceptable
 - TBD for the rest - need to work with the Business to define the remaining reasons
- Current State Eligibility Determination Flow: [Eligibility Determination Flow - Current](#)
- Future State Eligibility Determination Flow: TBD

Documents

Provide methods to allow uploading of required documents for an eligibility determination and allow viewing of documents related to the Veteran. Will need to allow VA.gov to upload directly to LGY or proxy them to LGY. They are stored locally in LGY (S3) - possibly through Lighthouse

- View COE
- List Documents Associated with Veteran (COE)
- Return a list of Documents Requested by VA (RLC) for processing application
- Upload Documents to LGY that were uploaded by the Veteran in VA.gov
- Download Document (is this the COE?)
- Based on the service member type and tours, LGY will need to provide what documentation is needed for Eligibility Overall Status = Unable to Determine Automatically

Basic Entitlement Amount (output from LGY Entitlement API)

The calculated amount of remaining entitlement based on eligibility, entitlement code and prior usage of benefit

- Basic Entitlement Amount
 - How will the actual entitlement amount be determined?
- Entitlement Code
- What is needed to support one time restoration (if anything)? Do we need to breakout into 2 separate concepts as John mentioned?
 - Need to determine if we can call one of the microservices from Guaranty_Remittance Calculation services

Loan Limits (output from LGY Entitlement API)

Allow veteran to see the loan limits for the geo area to know what the maximum loan amount and entitlement can be.

Will we be able to pass this without knowing the remaining entitlement or if they exercised their one time restoration option?

Funding Fee Status (output from LGY Funding Fee API)

Whether or not Veteran is exempt from paying a Funding Fee

- Exempt
- Non-Exempt

Application Status (output from LGY Eligibility API)

- Application Status
 - No Application Submitted
 - Application Submitted
 - Application Processed
 - Application Returned for more information

Identify Services to be moved from webLGY legacy to LGY Connect:

- SPIKE [LGY-1313650](#) for development to identify the current services that live in webLGY legacy that will need to be moved to LGY Connect
 - Eligibility, Entitlement services will need to be brought in to microservices

Conditions

- The current condition logic applied in eBenefits must be included in what will be passed back to VA.gov for display on the COE

API Swagger

- SPIKE [LGY-1313318](#) for development to assist in preparing the Swagger documentation.
