

## VA COVID-19 screening tool

A digital tool to help protect Veterans, caregivers,  
and employees at VA health facilities

---

### THE PROBLEM

To protect patients and staff, VA must now screen everyone for coronavirus symptoms and exposure each time they enter a health facility. In-person screening can delay care and increase exposure risk. It can also be stressful for some people.

### THE SOLUTION

A digital pre-entry screening tool allows Veterans, caregivers, and employees to answer questions on their mobile phones and share their results at the VA facility entrance. Staff members can then quickly triage people to either enter the building or go to a designated area for more screening.

Providing simple, easy-to-use digital tools like this one helps reduce wait times, ease stress, and lower exposure risk. It also helps Veterans gain confidence in the new reality of increased digital interactions as part of their VA health care experience.

---

### TOOL FEATURES

VA designed this tool in partnership with Veterans and medical center leadership, incorporating feedback from user testing to ensure the tool meets Veteran and employee needs.

#### Simple experience

Users can access the tool quickly via text message. Large text and buttons, plain language, and a simple flow of questions allow users to complete screening in under a minute.

#### Clear results

The results screen shows 1 of 2 messages (“OK to proceed” or “More screening needed”) plus a timestamp and next steps. The large, clear text and color-coded screens help staff easily triage.

#### Quick access to crisis support

For Veterans in need of immediate support, the tool provides quick access to the Veterans Crisis Line.

#### Easy-to-update screening protocols

The tool’s features allow us to update questions within 24 hours to meet evolving needs.

---

To start using the COVID-19 screening tool at your facility, simply  
direct patients and staff to text **screen** to **53079**.

# Veterans Health Administration (VHA) national and local leadership + Office of the Chief Technology Officer (CTO)

## How we're collaborating across the enterprise to create a better Veteran and employee experience

This project is an example of the innovative and collaborative nature of VA leadership and employees across the organization.

When the need to screen all patients and employees for COVID-19 symptoms and exposure arose, VA medical centers like the Durham VA Health Care System responded by quickly building facility-specific digital screening tools. The Office of the CTO then worked closely with system leadership to learn from their efforts and create a scalable tool that all VA facilities can easily use.

We continue to work with medical centers across the country to closely monitor usage, performance, and feedback, and to update content and features to meet evolving needs. For questions or to offer feedback, contact us at [feedback@va.gov](mailto:feedback@va.gov).

### WHAT VETERANS ARE SAYING

“ If you're doing this from your vehicle, then you are at a safe distance from staff and others. ”

“ Less stress having it in this format. ”

“ Straight and to the point. Very easy to answer these questions. ”

“ I'm on a lot of sites and I know a lot of people who would love to do this. ”

The screenshot shows a mobile app interface with three screening questions. Each question has two buttons: 'Yes' (light blue) and 'No' (dark blue). The questions are: 'In the past 24 hours, have you had a fever?', 'In the past 7 days, have you had a cough or shortness of breath that's new or getting worse?', and 'In the past 3 days, have you had any of these symptoms?'.

### HOW TO USE THIS TOOL AT YOUR VA FACILITY

To start using the COVID-19 screening tool at your facility, simply direct patients and staff to text **screen** to **53079**.
