

CARMA Integration Roadmap

VA.GOV

PHASE 1

CRAWL

- Establish mulesoft middle layer
- Start using Mulesoft as a proxy between VA.GOV and Salesforce
- Validate connectivity between VA.GOV and the Mule Gov. Cloud API
- Establish security and authentication based on Mule Gov Cloud best practices
- Integrate with Splunk for logging and monitoring

PHASE 2

WALK

- Establish single API call for Application submission
- Refactor the service to move relevant functionality to the middleware layer
- Build POC on Mule Gov Cloud to store and retrieve data from rapid MQ persistent queues

PHASE 3

RUN

- Establish persistent queueing to prevent service timeout
- Implement asynchronous design pattern for application integration with va.gov
