Payments from the VA list

\_\_\_\_\_\_

G Through Titul XXX (C) . . . .

Payments landing

Proposition Sees No.

Issues:
- potential fat-finger/overlap between FAB & pagination

How to make sure crisis line isn't the first thing read on every screen?
 Is the FAB discoverable & accessible enough for simple/list-level primary actions?

- Strengths:

  Meets all business criteria

  permonent, personalized homescreen piecos (personal summany, greeting)

  otheres to MBP, uses known UI pottern for global novigation

  User can tell where they are at all levels (tab bar, descriptive bock button labe), difference an leanily of the otherence have can leanily of the otherence have control for between levels)

  Room for different levels of assimmary based on timeliness & urgency (kinster volatiograf)

## Differences between v1a & current app

- New top level category: payments
  New top level category name: benefits (formerly claims)
  New location for profile, settings
  Change of category for Items previously in profile (now in home, benefits, payments)

- Nov U.I.

  New screen treatments:

  Home Screen with zones for evergreen content, featured content, personalization (bubbling up actions, pinning fourtier features)

- favorite features)
  Category screen (aummariting info & bubbling up actions)
  Category screen (aummariting info & bubbling up actions)
  Werefry interaction for sphemeriolfaction socreens
  To burd propers on all the non-took pages in the hierarchy (allowing users to quickly get home in a top)
  Back buttons have descriptive lobels
  Visual difference between home category if feature landing levels to communicate where a user is in the hierarchy
  Introduces vertical increen toreations, using transition direction to communicate where a user is in the hierarchy
  Introduces the lidea of a placement for globul constant action (see Helb)
  Introduces the lidea of a placement for globul constant action (see Helb)

## V1a ALT - profile in nav bar; profile, actions & subtasks in modals

# Issues:

Questions:

How to make sure crisis line isn't the first thing read on every screen?

- Strengths.

  Neets of business criteria

  Permanent, personalized homeszreen pieces (personal summary, greeting)

  odheese HEP, quest invanu II, pattern for global norigigation

  odheese at let where they are at old levels (to bot descriptive book button tobet, different levels of summary based on timelinese & urgency (home voolsograf)

## Differences between v1a & current app IA:

- New top level category payments
   New top level category name. benefits (formerly claims)
   New boation for profile, settings
   Change of category for items previously in profile (now in home, benefits, payments)

- Nov Uz

  New Suzean treatments

  Nove Uzean theorements

  Nove Suzean with zones for evergreen content, featured content, personalization (bubbling up actions, pinning foundine features)

  Cotegory suzean (summorizing into & bubbling up actions)

  Overlay interaction for ephement/action suzeans

  Worknow

  Worknow

  Worknow

  Worknow

  Worknow

  Worknow

  Interaction to the non-task pages in the hierarchy (allowing users to quickly get home in a tap)

  Back buttom have descriptive toletals

  Valuad difference between home, cotegory & feature landing levels to communicate where a user is in the hierarchy

  Introduces vertical acreant renations using transition derection to communicate where a user is in the hierarchy

  Introduces vertical acreant renations using transition derection to communicate where a user is in the hierarchy

  Introduces vertical acreant renations using transition derection to communicate where a user is in the hierarchy

  Introduces the idea of & placement for global/contentual actions (ex. Help)
